

Twister Tube

Materials required

- Multi colored small beads
- Brightly colored plastic tape
- 4 feet of 3/8 inch clear vinyl tubing
- 2 inch length of dowel (to fit snugly inside clear tubing)

Supplies

- Scissors
- Measuring stick
- Teaspoon

Instructions

1. Insert one half of the dowel rod into one end of clear tube.
2. Gently twist and loop the clear tube being careful not to crimp the tube (Figure 1).
3. Drop small beads into open end of tube.
4. Slide the open end of the tube over the exposed portion of the dowel so the ends of the tube meet in the center of the dowel. Wrap ends of the tube with tape (Figure 2).
5. Turn and tip the tube as you try to roll all the beads to one end of the tube.

Tip: If you want to use 2 feet of tubing, form it into one loop only.
